

Answer Key

HSA Item Number	Answer	Indicators Assessed
1	D	1.2.5 The student will select appropriate instruments and materials to conduct an investigation.
2	G	1.7.2 The student will identify and evaluate the impact of scientific ideas and/or advancements in technology on society.
3	A	1.1.5 The student will explain factors that produce biased data (incomplete data, using data inappropriately, conflicts of interest, etc.).
4	G	1.6.1 The student will use ratio and proportion in appropriate situations to solve problems.
5	BCR	1.1.3 The student will critique arguments that are based on faulty, misleading data or on the incomplete use of numbers.
6	J	3.1.1 The student will be able to describe the unique characteristics of chemical compounds and macromolecules utilized by living systems.
7	B	3.1.1 The student will be able to describe the unique characteristics of chemical compounds and macromolecules utilized by living systems.
8	J	1.2.1 The student will identify meaningful, answerable scientific questions.
9	D	1.2.6 The student will identify appropriate methods for conducting an investigation (independent and dependent variables, proper controls, repeat trials, appropriate sample size, etc.).
10	J	3.5.2 The student will analyze the interrelationships and interdependencies among different organisms and explain how these relationships contribute to the stability of the ecosystem.
11	B	3.2.1 The student will explain processes and the function of related structures found in unicellular and multicellular organisms.
12	BCR	3.5.3 The student will investigate how natural and man-made changes in environmental conditions will affect individual organisms and the dynamics of populations.
13	C	3.1.1 The student will be able to describe the unique characteristics of chemical compounds and macromolecules utilized by living systems.
14	J	3.1.3 The student will be able to compare the transfer and use of matter and energy in photosynthetic and non-photosynthetic organisms.

15	D	3.1.3 The student will be able to compare the transfer and use of matter and energy in photosynthetic and non-photosynthetic organisms.
16	BCR	3.1.2 The student will be able to discuss factors involved in the regulation of chemical activity as part of a homeostatic mechanism.
17	A	3.3.2 The student will illustrate and explain how expressed traits are passed from parent to offspring.
18	F	3.3.2 The student will illustrate and explain how expressed traits are passed from parent to offspring.
19	C	3.2.2 The student will conclude that cells exist within a narrow range of environmental conditions and changes to that environment, either naturally occurring or induced, may cause changes in the metabolic activity of the cell or organism.
20	G	1.4.2 The student will analyze data to make predictions, decisions, or draw conclusions.
21	C	1.4.6 The student will describe trends revealed by data.
22	F	3.1.2 The student will be able to discuss factors involved in the regulation of chemical activity as part of a homeostatic mechanism.
23	BCR	3.2.2 The student will conclude that cells exist within a narrow range of environmental conditions and changes to that environment, either naturally occurring or induced, may cause changes in the metabolic activity of the cell or organism.
24	H	3.2.1 The student will explain processes and the function of related structures found in unicellular and multicellular organisms.
25	C	3.1.3 The student will be able to compare the transfer and use of matter and energy in photosynthetic and non-photosynthetic organisms.
26	J	3.2.1 The student will explain processes and the function of related structures found in unicellular and multicellular organisms.
27	D	3.3.3 The student will explain how a genetic trait is determined by the code in a DNA molecule.
28	G	3.4.2 The student will estimate degrees of relatedness among organisms or species.
29	B	3.2.1 The student will explain processes and the function of related structures found in unicellular and multicellular organisms.
30	F	3.2.1 The student will explain processes and the function of related structures found in unicellular and multicellular organisms. 3.2.2 The student will conclude that cells exist within a narrow

31	D	range of environmental conditions and changes to that environment, either naturally occurring or induced, may cause changes in the metabolic activity of the cell or organism.
32	J	3.3.3 The student will explain how a genetic trait is determined by the code in a DNA molecule.
33	BCR	3.3.3 The student will explain how a genetic trait is determined by the code in a DNA molecule.
34	F	3.1.2 The student will be able to discuss factors involved in the regulation of chemical activity as part of a homeostatic mechanism.
35	C	3.3.1 The student will demonstrate that the sorting and recombination of genes during sexual reproduction has an effect on variation in offspring.
36	F	3.3.2 The student will illustrate and explain how expressed traits are passed from parent to offspring.
37	B	3.4.1 The student will explain how new traits may result from new combinations of existing genes or from mutations of genes in reproductive cells within a population.
38	J	3.3.4 The student will interpret how the effects of DNA alteration can be beneficial or harmful to the individual, society, and/or the environment.
39	B	3.2.2 The student will conclude that cells exist within a narrow range of environmental conditions and changes to that environment, either naturally occurring or induced, may cause changes in the metabolic activity of the cell or organism.
40	H	3.4.1 The student will explain how new traits may result from new combinations of existing genes or from mutations of genes in reproductive cells within a population.
41	B	3.3.2 The student will illustrate and explain how expressed traits are passed from parent to offspring.
42	BCR	3.4.2 The student will estimate degrees of relatedness among organisms or species.
43	C	3.4.1 The student will explain how new traits may result from new combinations of existing genes or from mutations of genes in reproductive cells within a population.
44	H	3.3.1 The student will demonstrate that the sorting and recombination of genes during sexual reproduction has an effect on variation in offspring.
45	A	3.2.1 The student will explain processes and the function of related structures found in unicellular and multicellular organisms.
46	F	3.4.1 The student will explain how new traits may result from new combinations of existing genes or from mutations of genes in reproductive cells within a population. 3.5.2 The student will analyze the interrelationships and

47	D	interdependencies among different organisms and explain how these relationships contribute to the stability of the ecosystem.
48	F	3.5.2 The student will analyze the interrelationships and interdependencies among different organisms and explain how these relationships contribute to the stability of the ecosystem.
49	C	3.5.1 The student will analyze the relationships between biotic diversity and abiotic factors in environments and the resulting influence on ecosystems.
50	BCR	3.5.1 The student will analyze the relationships between biotic diversity and abiotic factors in environments and the resulting influence on ecosystems.
51	D	3.5.4 The student will illustrate how all organisms are part of and depend on two major global food webs that are positively or negatively influenced by human activity and technology.
52	G	3.5.2 The student will analyze the interrelationships and interdependencies among different organisms and explain how these relationships contribute to the stability of the ecosystem.
53	A	3.5.2 The student will analyze the interrelationships and interdependencies among different organisms and explain how these relationships contribute to the stability of the ecosystem.
54	J	3.5.3 The student will investigate how natural and man-made changes in environmental conditions will affect individual organisms and the dynamics of populations.
55	C	3.5.3 The student will investigate how natural and man-made changes in environmental conditions will affect individual organisms and the dynamics of populations.

Student responses to Constructed Response items can be found in the scoring section of the mdk12.org site.
